MANUFACTURER'S CERTIFICATION Tax Credits for Consumer Energy Efficiency

This is to certify that the polyurethane foam packaged in the VERSI-FOAM Medium, High, Class I, and Slow-Rise Formulations:

Are "Eligible Building Envelope Components" that qualify for the Federal Tax Credit which is allowed under the Tax Credits for Consumer Energy Efficiency. The primary purpose of Versi-Foam polyurethane foam kits is to insulate and provide an air barrier for the building envelope. Versi-Foam is long-lasting and will not sag or settle. Versi-Foam's useful lifetime far exceeds the mandated 5 year requirement for insulation as mandated by the Tax Credits for Consumer Energy Efficiency. Versi-Foam meets the requirements set forth within the IECC & Amendments for air sealing and insulation to walls, ceilings, or other parts of the building envelope as long as the following installation practices were followed during installation:

- The product was installed in a manner which meets the recommended minimum R-value as dictated by the IECC & Amendments for the specific region of the country. The total R-value can consist the following:
 - Use of VERSI-FOAM as the sole insulation product. VERSI-FOAM has an R-value of 6.7 at one inch with the Class I formulation and an R-value of 7.7 at one inch with the Standard formulation.
 - Use of VERSI-FOAM in conjunction with another insulation product (i.e. fiberglass, cellulose, etc). VERSI-FOAM has an R-value of 6.7 at one inch with the Class I formulation and an R-value of 7.7 at one inch with the Standard formulation.

VERSI-FOAM polyurethane foam is an air barrier material and insulation which improves the energy efficiency of the building envelope.

Respectfully submitted,

MARK M. WOJTIUK
General Manager
RHH Foam Systems, Inc.
(manufacturers of VERSI-FOAM)
