

# GETTING STARTED WITH SPRAY FOAM KITS

*Posted on July 16, 2020 by Versi-Foam*

Category: [News](#)

Most of us like to keep on doing what we're doing. Isaac Newton saw this and turned it into the first law of motion: an object at rest tends to stay at rest. When it comes to spray foam kits, that tendency could keep you from discovering a better way to insulate.

Humans are generally wary of the new and unfamiliar. If you've only heard about spray foam insulation kits but never watched them being installed or attempted to do it yourself, it can seem daunting. We're here to reassure you that it's not. The advantages of a Versi-Foam® spray foam kit are worth the effort it takes to venture into unknown territory.

We have customers who have been using Versi-Foam® for many years. They love it because they say the quality of the product is outstanding and the price helps them stay competitive. And the foam expands to six times its original liquid volume, which makes it very cost-effective.

In addition, Versi-Foam® spray foam kits perform well in most climates and weather conditions. As long as you ensure that the chemicals are within the recommended temperature range of 65° F and 90° F before and during use, the installation should go smoothly.

As a low-pressure foam, it's easy to use. The patented U-Control gun allows you to dispense the product at the rate you want without difficulty and it's designed to be comfortable in your hand for long periods of time.

Applying Versi-Foam® is as easy as 1, 2, 3.

1. Stand two feet away from your target. Pull the trigger on the gun all the way back and then ease it forward until you get the right level of flow.
2. Spray a strip around the perimeter then, with a back-and-forth motion, fill the area from top to bottom with the insulation.
3. Wait 30-45 seconds and Versi-Foam® will be tack free to the touch.

Remember, the faster you move your hand back-and-forth, the thinner the foam will be. If you need more than two inches of thickness, apply the spray foam in more than one pass.
