

INSULATION FOR PLANT MAINTENANCE

Posted on March 11, 2019 by Versi-Foam

If you are responsible for the regular maintenance of a manufacturing plant or other industrial facility, you probably insist that regular attention is paid to insulation and sealant.

Polyurethane foam is often specified for these tasks. However, the layout of the facility sometimes makes it impossible to use a conventional foam machine brought in by a polyurethane foam contractor. Versi-Foam® perfectly suits the needs of these projects because it is a disposable, portable system. It can be taken to any location where foam needs to be applied. No outside source of power or pressure is required.

Versi-Foam is available in different densities and different sizes. There is a Versi-Foam formulation available for most industrial requirements. It can be used to insulate walls, ceilings, roofs, pipes, tanks, and duct work. It can be used to seal large gaps and crevices and for sound deadening.

Plant Maintenance is only one of the many applications for Versi-Foam. We have distributors of our spray foam products in many areas. Insulation is our business.

Read more about the versatility of Versi-Foam and its many [applications](#) for individuals and businesses:
