

STAGE AND FILM

Posted on March 11, 2019 by Versi-Foam

Versi-Foam® can be used to create detailed stage and film props. It has been featured in several major motion pictures, theatrical productions, television shows, museums, theme parks, theaters, displays, and haunted houses. You may have already seen it, you just don't know it. Versi-Foam is a professional product that can be used as a sculpting medium and a molding material to create just about anything, in any size.

First, build a base out of wood, chicken wire, screen, styrene board, or whatever works best for you. Then, spray apply the foam to the base, building it up where you will be shaping your form. Finally, allow to cure. You can now mold it, carve it, sand it, cut it, grind it, or shave it. You can paint it and coat it. You can cover it with polyester resins. You can create any surface texture in any shape and color.

See how Versi-Foam was used in [prop building](#) to create 9' mushrooms.

Contact us if you would like to discuss your specific spray foam application for stage and film. We have distributors of our spray foam products in many areas. Insulation is our business.
