

# SPRAY FOAM INSULATION FOR HVAC SYSTEMS

*Posted on July 2, 2019 by Versi-Foam*

Category: [News](#)

Spray foam insulation kits are a convenient, economical way to insulate your commercial or residential HVAC system, increasing your level of comfort and saving money at the same time.

The [purpose](#) of an HVAC system is to regulate the temperature and quality of indoor air. It creates an artificial climate in an enclosed space. Since people today spend most of their time indoors, the effectiveness of the HVAC system is very important to their overall well-being and productivity. In addition to the human resource impacts, there are ecological factors to take into account. HVAC systems are large users of energy in commercial buildings. If they aren't operating at peak efficiency, it will cost more to keep everyone in the building comfortable and property owners, tenants, and the environment will suffer.

One aspect of maintaining an efficient HVAC system is ensuring that it is insulated properly. There are several ways to do this, but we believe the best is with spray foam insulation. If you want to reduce movement, reduce moisture, and uphold the integrity of the building envelope, expanding polyurethane foam is an excellent way to seal HVAC penetrations in the walls, ceiling, and floors of a structure. Versi-Foam® disposable foam kits easily and conveniently insulate the [heating, ventilation, and cooling system](#) of your building. The packages are self-contained and compact which means you can take the spray foam insulation kits into small areas without worry because you don't need access to power or pressure in order to use them. Once applied, the product helps maintain temperature, eliminate condensation, and reduce vibration.

Your heating, ventilation, and air conditioning system keeps your home or office comfortable. It's also creates openings through which drafts can enter the interior space and reduce your comfort level. Sealing those openings with spray foam insulation will prevent air from seeping in and out of your building and save money in the long run.
