

WHY CHOOSE VERSI-FOAM® SPRAY FOAM INSULATION KITS

Posted on January 16, 2020 by Versi-Foam

Categories: [News](#), [Uncategorized](#)

How do you choose the right spray foam insulation kit? If you're new to the product, it might not look like there are any significant differences between brands, but we can assure you, there are. Versi-Foam® was born out of extensive experience in the construction industry. We learned what spray foam insulation users need to complete the job quickly, easily, and successfully.

Reasons to choose Versi-Foam® Spray Foam Insulation Kits

Ease of Use. The patented U-Control gun allows you to control how much foam is dispensed by how hard you pull on the trigger. It couldn't be easier or more intuitive. Versi-Foam® kits are also portable and disposable.

The kits also come equipped with a plastic temperature strip which lets you know at a glance whether the foam is at the ideal temperature for use. If the foam is too cold or too hot, the yield will be lowered. If the temperature of the foam is too cold (the indicator on the strip is in the blue area), warm the containers until the indicator moves to the green area. If the foam is too hot (the indicator on the strip is in the red area), cool the containers until foam is in the ideal range.

In addition, most of our systems can be shut down and used on another day, giving you the flexibility you need to get the job done.

No Experience Necessary. If you've never used a [spray foam insulation kit](#) before, there's no need to be apprehensive. We've taken great care to provide all the information a first-timer needs to be successful. In addition to the easy-to-read temperature indicator and the U-control gun, we've provided how-to videos in English and Spanish. There is also a scannable FAQ page on our website with a detailed trouble-shooting guide.

Product Quality. Versi-Foam® doesn't contain any urea formaldehyde, volatile organic compounds, chlorofluorocarbons, or Penta-BDEs. All of our Class I kits are manufactured with an anti-microbial formula that stops mold from growing on the surface of the foam and provides a safeguard against the growth of the five most common types of fungi found in homes.

Product Support. Our friendly, knowledgeable customer support center is available to you if you run into issues or just want to talk to someone before beginning your project. We have made product information and application instructions easy to find on our website, which means you don't have to hunt for answers to your questions. The [dealer locator](#) helps you to quickly find a dealer near you so that you can work on your own timeline.

Flexible and Versatile. Most of our spray foam kits can be shut down and reused again on another day. Only the System 1 kit needs to be used the same day it's opened. The U-Control gun allows you to dispense foam at a rate low enough to write your name with it or as high as 6 lbs. per minute. Versi-Foam® kits can be used by one person or a group of people working on the same project. Once the foam is fully cured it can be sanded, cut, carved, shaved, or painted.

Take a look at our easy, intuitive 9-step application process and visit a dealer near you to talk about your project.

1. Shake each tank or box.
2. Make sure the chemical tanks are within the green operating temperatures.
3. Connect the hoses.
4. Turn the tank valves to the "on" position.
5. Perform a test shot.
6. Attach a nozzle to the dispensing gun.
7. Disengage the safety.
8. Point the gun at your target.
9. Pull back on the trigger.
